# **Pressure Switch**

**EDS 820** 

Relative pressure

Status display

## **IO-Link**

# **Description:**

IO-Link is the communication between the sensor/actuator (IO-Link device) and an IO-Link master based on a point-topoint interface. This technology has been integrated into the pressure switch series EDS 820.

#### The advantages:

Process data, parameters and diagnostic information of the pressure switch can be transmitted via a standard cable (SDCI mode). An integrated LED display provides information on the operating mode and the switching statuses.

Simple exchange – the IO-Link master saves the parameters of the connected pressure switch and transmits them to the newly connected pressure transmitter when replaced. Thus, time-consuming new parameterisations will no longer be required.

If IO-Link is not used, the sensor functions as a pressure switch with two switching outputs (SIO mode).

To create customer-specific small series or to duplicate sensor settings across the system, the sensor can also be easily adjusted outside the system to suit the particular application, with the HYDAC Programming Device HPG P1-000, the HYDAC Programming Adapter ZBE P1-000 or by means of the Portable Data Recorder HMG 4000.

Typical fields of application are machine tools, handling and assembly automation, intralogistics or the packaging industry.

#### **Technical data:**

Input data   Measuring ranges   bar   16   25   40   60   100   250   400   600

IO-Link specific data
IO-Link revision V1.1 / support V1.0
Transmission rate, baud rate <sup>2)</sup> 38.4 kBaud (COM2)
Minimum cycle time 2.5 ms
Process data width 16 bit
SIO mode supported Yes
M-sequence capability  PREOPERATE = TYPE_0  OPERATE = TYPE_2_2  ISDU supported
IO Device Description (IODD) download at: https://ioddfinder.io-link.com/#/
Other data
Supply voltage 10 32 V DC
Residual ripple of supply voltage ≤ 5 %
Power consumption ≤ 1 W without active outputs
Weight ~ 65 g
Note: Reverse polarity protection of the supply voltage, overvoltage, override and short circuit

ction of the supply voltage, overvoltage, override and short circuit protection are provided.

FS (Full Scale) = relative to complete measuring range

1) -25 °C with FKM seal, -40 °C on request

<sup>2)</sup> Connection with unshielded standard sensor line possible up to a maximum line length of 20 m.

3) With mounted mating connector in corresponding protection class

# **Setting options:**

The EDS 820 IO-Link has 2 switching outputs whose switching characteristics are parameterisable.

# **Setting ranges for the** switching outputs:

Measuring range in bar	Lower limit of RP / FL in bar	Upper limit of SP / FH in bar
0 16	0.15	16.00
0 25	0.25	25.00
0 40	0.4	40.0
0 100	1.0	100.0
0 250	2.5	250.0
0 400	4	400
0 600	6	600

Measuring		Incre-
range	betw. RP and SP	ment*
in bar	& FL and FH	in bar
0 16	0.15	0.05
0 25	0.25	0.05
0 40	0.4	0.1
0 100	1.0	0.2
0 250	2.5	0.5
0 400	4	1
0 600	6	1

\* All ranges given in the table can be adjusted by the increments shown.

SP = switch point

RP = switch-back point

FL = pressure window lower value

FH = pressure window upper value

### Pin connections:

Pin	Signal	Description
1	L+	+U <sub>B</sub>
2	Q2	Switching output (SP2)
3	L-	0 V
4	Q1/C	IO-Link communication / switching output (SP1)

#### Status LEDs:

The pressure switch provides three status LEDs at the electrical connection:

LED 1 (Q 1)	Yellow	Switching output 1 active (high)
LED 2 (Q 2)	Yellow	Switching output 2 active (high)
LED 3 (Com)	Green, continuous	Switch in SIO mode
	Green, flashing	Switch in IO-Link mode (SDCI)

#### **Dimensions:**

EDS 8 2 <u>4</u> - <u>F31</u> - <u>XXXX</u> - <u>000</u>

# **Mechanical connection**

= G 1/4 A ISO 1179-2

#### **Output**

F31 = IO-Link interface

#### Measuring ranges in bar

0016; 0025; 0040; 0060; 0100; 0250; 0400; 0600

#### Modification number

000 = standard

#### Accessories:

Appropriate accessories, such as mating connectors and programming units, can be found in the Accessories brochure.

#### Note:

The information in this brochure relates to the operating conditions and applications described.

For applications or operating conditions not described, please contact the relevant technical department.

Subject to technical modifications.
